- CarteRapide — SaaS digital business-card platform: designed the Row-Level Security model, image optimization pipeline and input validation layer, then refactored the component architecture for reuse.
- Built the platform's full Cloudflare infrastructure — build pipeline, domain routing and a secure upload worker — and shipped it to production.
- TempsCaisse — time-tracking and profitability SaaS for teams: role-based access control, Excel import/export, Stripe subscription billing and Prisma ORM data layer.
- GoBot / GoRampe — PWA managing accessibility-ramp installations (measurements, quoting, billing, client workflows), integrated with HubSpot CRM and n8n automations.
- Automated the content pipeline with n8n: generation and publishing to a Sanity CMS blog, LinkedIn and Facebook via Gemini Pro, with Google Chat notifications.
- Migrated 5 self-hosted services (SuiteCRM, NocoDB, n8n, Vaultwarden, Uptime Kuma) from Proxmox to a VPS with zero open ports, using Tailscale and Cloudflare tunnels.
